<p>This course relates computer programming skills to statistical data analysis and design of experiment which form foundations of scientific research. Students will learn to apply various programming algorithms and software functions to design scientific experiments in a systematic and cost-saving way, to analyze the experimental data in a quantitative manner, to test hypotheses based on firm mathematical background, and to make decisions that are statistically meaningful. Students will practice how to utilize the Matlab program to carry out the entire research and design process in a systematic way. Basic principles of statistics to analyze, sort, and verify experimental data will be addressed. Students will apply these techniques to an engineering design project at the end of the semester.</p>

[ ]

1		Matrix operation Basic Statistics, Data Types, Probability Distribution State Equation of Perfect Gases	Lecture Computer Lab	
2		Repeatability and Reproducibility Main effects and Interactions Plotting data	Lecture Computer Lab	
3		Normality test z - statistics and t - statistics paired - t and 2 - sample - t tests	Lecture Computer Lab	
4		Patterned and Symbolic Data Gage R&R Interim check - up	Lecture Computer Lab	
5		Test of equal variances Factors and levels State Equation of van der Waals Gas	Lecture Computer Lab	

[ ]

6		Expressions, equations, and functions Multiple plotting by looping Internal Energy and Enthalpy Calculation	Lecture Computer Lab	
7		Presentation and peer review Entropy and Gibbs free energy	Competition and Presentation	
8		Review Heat capacity estimation	Examination	
9		Solving non-linear systems Interpolation and Extrapolation Clausius - Clapeyron equation	Lecture Computer Lab	
10		Identifying significant factors Pooling 1 - component phase diagram	Lecture Computer Lab	
11		Correlation and regression coefficients Linear regression Optimizing the model equation Enthalpy, Entropy and Gibbs free energy of mixing	Lecture Computer Lab	
12				
13		DOE Project interim check - up Fractional Factorial Design Common tangent construction and chemical potential	Competition and Presentation	
14		Non - linear curve fitting Finding x - intercepts and area under curves 2 - component phase diagram: complete solubility	Lecture Computer Lab	
15		DOE Project presentation 2 - component phase diagram: immiscibility gap	Competition and Presentation	
16		Final Examination	Examination
